

## Rental Order Processing Sage 100cloud ERP

### KEY FEATURE

Track costing of jobs by rolling up revenue and expenses for products sold, rentals, crews, and sub-rentals

### KEY FEATURE

Manage rental operations from generation of quotes, to flexible pricing and billing, to viewing inventory availability, to streamlined warehouse operations

### KEY FEATURE

Schedule all necessary deliveries and pickups easily and instantly

### KEY FEATURE

Sell and rent on the same transaction, as well as selling or renting the same item

The Rental Order Processing Ecoboost is a complete embedded software solution for all rental and crew management built on the leading Sage 100cloud ERP platform that utilizes the full functionality of all available modules. It also integrates with the leading Sage CRM package for a complete end-to-end solution.

### Billing and Pricing

- Flexible Pricing Options – daily, weekly, monthly, user defined period, or set amount per item
- Flexible Invoicing Options – bill in advance, upon return, periodically, allows for setting invoicing policy for the extended rentals
- Allows for entry of different rental and billing periods by order
- Generate user definable rental contract, invoice or pull sheet forms
- Allows for tracking and billing of missing and damaged inventory
- Bill Customers for missing and damaged products

### Inventory Management

- Track status of serialized items, allows for creation of user definable serialized item status codes
- View time-based inventory availability – drill down to specific orders for a given period
- Orders are managed by allowing users to process partial returns, early returns, late returns – each item's billing is reconciled when returned
- Allows for generation of sub-rental purchase orders from the Order Entry program; tracks and allows for returning of sub-rentals to vendors
- Allows for scheduling of preventive maintenance tasks for equipment
- Tracks past rentals of serialized items

### Crewing

- Allows for required skill verification by nature of task and check for scheduling conflicts
- Allows for entry of required crewing at the time of rental order entry
- Allows for collection and invoicing of work done by the crew at the field – then allows for loading of tracked information into the Payroll system
